**Summary.** The most important points of pathomorphologic investigation must be taken care in cases when lymphoproliferative disorders are suspected discussed. Attention is paid to clinical research, appointment card filling, quantity of biopsy material and its histological processing. Diagnostic conditions of routine histology and immunophenotyping were determined. It was concluded, that final pathomorphologic diagnosis of lymphoma according to WHO Classification of tumours of haematopoietic and lymphoid tissues 2008 is feasible only due to close interactions between clinical facilities and morphologic departments which, as result, lead to appropriate treatment.

**Key words:** lymphoma, diagnosis of lymphoma, immunohistochemistry.
